Subj: CHEMICAL HAZARD RESPONSE INFORMATION SYSTEM (CHRIS)

1. PURPOSE. This manual provides information needed for decision-making by Coast Guard personnel during emergencies that occur during the waterborne transport of hazardous chemicals. It also provides information that can be used by the Coast Guard as it strives to improve safety procedures and prevent accidents.
2. ACTION. Area and district commanders, commanders of maintenance and logistics commands, commanding officers of headquarters units, assistant commandants for directorates, Chief Counsel, and special staff offices at Headquarters shall ensure that this Manual is available for responders and all others that may benefit from this information.
3. DIRECTIVES AFFECTED. COMDTINST M16465.12B of 2 November 1992, is cancelled.
4. DISCUSSION. This comprehensive edition of CHRIS replaces the earlier 4-volume series. Obsolete information was deleted and 12 new information fields were added to facilitate safe and effective response to hazardous chemical releases. ## **1. INTRODUCTION**

The Chemical Hazards Response Information System (CHRIS) is designed to provide information needed for decision-making by responsible Coast Guard personnel during emergencies that occur during the water transport of hazardous chemicals. CHRIS also provides much information that can be used by the Coast Guard in its efforts to achieve better safety procedures and so prevent accidents.

CHRIS consists of a handbook or manual, a hazard assessment computer system (HACS), and technical support personnel located at Coast Guard headquarters. These components and their relations to one another are described in Section 2 of this manual.

## **2. COMPONENTS OF CHRIS**

### **2.1 HAZARDOUS CHEMICAL DATA**

This manual is the cornerstone of CHRIS. For each substance, it lists the specific chemical, physical, and biological data needed for the preparation and use of the other components of the system. The manual can also be used after the initial response action, when there is sufficient time to use more detailed information.

The Hazardous Chemical Data Manual is intended for use primarily by the On-Scene Coordinator (OSC) and by Regional Response Teams for devising, evaluating, and carrying out response plans.

### **2.2 HAZARD ASSESSMENT COMPUTER SYSTEM**

The Hazard Assessment Computer System (HACS) permits trained specialists to obtain very detailed hazard evaluations quickly, when requested by OSC personnel, and can be accessed through the National Response Center.

### 3. EXPLANATION OF TERMS

This section explains the special terms used in the data sheets, gives the sources of specific items, and includes other information that will be useful to the reader in interpreting the data. The paragraphs below are keyed to the relevant portions by the subheading and number used in the data sheets.

The expression “**Not pertinent**” means that the data item either has no real meaning (such as the flash point of a nonflammable chemical) or is not required for assessing a hazardous situation. The expression “**Currently not available**” means that the information sought was not found in the general or specialized data sources listed in Section 10 of this manual. In a few cases where important data were not available, values were estimated by usually reliable procedures; all such values are labeled “**(est.)**”. If more accurate values for those items are found, they will be included in later revisions.

The **name** used for each of the chemicals included in the CHRIS manuals is either (1) that specified in the Code of Federal Regulations, Title 46, Part 151 or (2) a common name for those chemicals not now regulated by Sub chapters O and D but known to be hazardous during shipment. The data sheets are arranged in alphabetic order by chemical name, not by the 3-letter code.

The **3-letter code** is designed to facilitate correct identification of chemicals in oral or written communication. The code should be used only *in addition* to the compound name; it should not be used alone. For transmitting the code, use the phonetic alphabet given in the “International Code of Signals.”

#### 1. RESPONSE TO DISCHARGE

In every case of a discharge or leak, it is obvious that an effort should be made to reduce, stop, or contain the flow of material at its source if this can be done safely. The purpose of the terms used in this section is to describe in a general way the cautionary and corrective responses that are described in greater detail in the Response Methods Handbook.

- “*Issue warning*” is used when the chemical is a *poison*, has a *high flammability*, is a *water contaminant*, is an *air* contaminant (so as to be hazardous to life), is an *oxidizing* material, or is *corrosive*.
- “*Restrict access*” is used only for those chemicals that are unusually and immediately hazardous to personnel unless they are protected properly by respirators, protective clothing, etc.
- “*Evacuate area*” is used primarily for unusually poisonous chemicals or those that ignite easily.
- “*Mechanical containment*” is used for water-insoluble chemicals that float and do not evaporate readily.

- “*Should be removed*” is used for chemicals that cannot be allowed to disperse because of their harmful effect on humans or on the ecological system in general. The term is not used unless there is a reasonable chance of preventing dispersal, after a discharge or leak, by chemical and physical treatment.
- “*Chemical and physical treatment*” is recommended for chemicals that can be removed by skimming, pumping, dredging, burning, neutralization, absorption, coagulation, or precipitation. The corrective response may also include the use of dispersing agents, sinking agents, and biological treatment.
- “*Disperse and flush*” is used for chemicals that can be made non-hazardous to humans by simple dilution with water. In a few cases the response is indicated even when the compound reacts with water because, when proper care is taken, dilution is still the most effective way of removing the primary hazard.

## 2. CHEMICAL DESIGNATIONS

**2.1 Coast Guard Compatibility Classification** - An entry is made when the chemical has been assigned to one of the 43 cargo groups listed in Code of Federal Regulations, Title 46, Part 150, “Compatibility of Cargoes.” Appropriate parts of these regulations are included in this manual. Chemicals included in the regulation were assigned to a group by the Cargo and Hazardous Materials Standards Division, Coast Guard Headquarters. If the chemical is not a liquid carried in bulk in ships' tanks, this data item is “Not listed.”

**2.2 Chemical Formula** - This has been limited to a commonly used one-line formula. In the case of some organic compounds it has not been possible to represent chemical structure within such a limitation.

**2.3 IMO/United Nations Numerical Designation** - The designation is that of the “International Maritime Dangerous Goods Code” published by the International Maritime Organization (IMO), London, 1977.

**2.4 Department of Transportation Identification Number** - This is an identification number assigned by the Department of Transportation to aid in categorizing hazards and recommended responses. The ID's can be located in the Hazardous Materials Table, part 172.101 of 49 CFR.

**2.5 Chemical Abstracts Services Registry Number** - The unique identification number assigned each compound registered with the Chemical Abstracts Service (CAS) is listed to aid in quick identification of the compound.

**2.6 NAERG Guide Number** – The number of the guide in the North American Emergency Response Guidebook listing specific emergency response actions for a particular CHRIS chemical. The 1996 edition of the guidebook was used in the preparation of this edition of the CHRIS manual.

**2.7 Standard Industrial Trade Classification** – The five digit code identifying the chemical's commodity category per revision 3 of the subject classification. These codes are compatible with the International Harmonized System codes used in foreign trade.

### 3. HEALTH HAZARDS

**3.1 Personal Protective Equipment** - The items listed are those recommended by (a) manufacturers, either in technical bulletins or in Material Safety Data Sheets, (b) the Chemical Manufacturers Association, or (c) the National Safety Council, for use by personnel while responding to fire or accidental discharge of the chemical. They are intended to protect the lungs, eyes, and skin. Safety showers and eyewash fountains are considered to be important protective equipment for the handling of almost all chemicals; they are not usually listed.

**3.2 Symptoms Following Exposure** - These are brief descriptions of the effects observed in humans when the vapor (gas) is inhaled, when the liquid or solid is ingested (swallowed), and when the liquid or solid comes in contact with the eyes or skin.

**3.3 Treatment for Exposure** - "First-aid" procedures are recommended. They deal with exposure to the vapor (gas), liquid, or solid and include inhalation, ingestion (swallowing) and contact with eyes or skin. The instruction "Do NOT induce vomiting" is given if an unusual hazard is associated with the chemical being sucked into the lungs (aspiration) while the patient is vomiting. "Seek medical attention" or "Call a doctor" is recommended in those cases where only competent medical personnel can treat the injury properly. In all cases of human exposure, seek medical assistance as soon as possible.

**3.4 Threshold Limit Value – Time Weighted Average** -The Threshold Limit Value Time Weighted Average (TLV-TWA) is usually expressed in units of parts per million (ppm) - i.e., the parts of vapor (gas) per million parts of contaminated air by volume at 25°C (77°F) and one atmosphere pressure. For a chemical that forms a fine mist or dust, the concentration is given in milligrams per cubic meter (mg/m<sup>3</sup>). The TLV is defined as the concentration of the substance in air that can be breathed for five consecutive eight-hour workdays (40-hour work week) by most people without adverse effect (American Conference of Governmental Industrial Hygienists, "Threshold Limit Values for Substance in Workroom Air, Adopted by ACGIH"). As some people become ill after exposure to concentrations lower than the TLV, this value cannot be used to define exactly what is a "safe" or "dangerous" concentration.

No entry appears when the chemical is a mixture; it is possible to calculate the TLV for a mixture only when the TLV for each component of the mixture is known and the composition of the mixture by weight is also known.

**3.5 Threshold Limit Value - Short-Term Exposure Limits** - The parts of vapor (gas per million parts of contaminated air by volume at 25°C (77°F) and one atmosphere pressure is given. The limits are given in milligrams per cubic meter

for chemicals that can form a fine mist or dust. The values given are the maximum permissible average exposures for the time periods specified.

**3.6 Threshold Limit Value – Ceiling Value** – The parts of vapor (gas per million parts of contaminated air by volume at 25°C (77°F) and one atmosphere pressure is given. The limits are given in milligrams per cubic meter for chemicals that can form a fine mist or dust. The values given are for a concentration that is not to be exceeded at any time.

**3.7 Toxicity by Ingestion** - The Grade and corresponding LD<sub>50</sub> value are those defined by the National Academy of Sciences, Committee on Hazardous Materials, "Evaluation of the Hazard of Bulk Water Transportation of Industrial Chemicals, A Tentative Guide," Washington, D.C., 1972. Data were also collected from other sources and converted to the appropriate Grade before entry in this manual. The term LD<sub>50</sub> signifies that about 50% of the animals given the specified dose by mouth will die. Thus, for a Grade 4 chemical (below 50 mg/kg) the toxic dose for 50% of animals weighing 70 kg (150 lb) is 70 X 50 = 3500 mg = 3.5 g, or less than 1 teaspoonful; it might be as little as a few drops. For a Grade 1 chemical (5 to 15g/kg), the LD<sub>50</sub> would be between a pint and a quart for a 150-lb man. All LD<sub>50</sub> values have been obtained using small laboratory animals such as rodents, cats, and dogs. The substantial risks taken in using these values for estimating human toxicity are the same as those taken when new drugs are administered to humans for the first time.

**3.8 Toxicity by Inhalation** – Similar to the Toxicity by Ingestion entry, except that the route of exposure is inhalation instead of ingestion. Units and definition of units are the same.

**3.9 Chronic Toxicity** - Where there is evidence that the chemical can cause cancer, mutagenic effects, teratogenic effects, or a delayed injury to vital organs such as the liver or kidney, a qualitative description of the effect is given.

**3.10 Vapor (Gas) Irritant Characteristics** - The most appropriate of five statements listed below is given. Source: National Academy of Sciences, Committee on Hazardous Materials, "Evaluation of the Hazard of Bulk Water Transportation of Industrial Chemicals, A Tentative Guide," Washington, D.C., 1972.)

- (1) Vapors are nonirritating to eyes and throat.
- (2) Vapors cause a slight smarting of the eyes or respiratory system if present in high concentrations. The effect is temporary.
- (3) Vapors cause moderate irritation such that personnel will find high concentrations unpleasant. The effect is temporary.
- (4) Vapors are moderately irritating such that personnel will not usually tolerate moderate or high concentrations.
- (5) Vapors cause severe irritation of eyes and throat and can cause eye and lung injury. They cannot be tolerated even at low concentrations.

**3.11 Liquid or Solid Irritant Characteristics** - The most appropriate of the following five statements is given (same source as 5.8 above):

- (1) No appreciable hazard. Practically harmless to the skin.
- (2) Minimum hazard. If spilled on clothing and allowed to remain, may cause smarting and reddening of skin.
- (3) Causes smarting of the skin and first-degree burns on short exposure; may cause second-degree burns on long exposure.
- (4) Fairly severe skin irritant. May cause pain and second-degree burns after a few minutes' contact.
- (5) Severe skin irritant. Causes second- and third-degree burns on short contact and is very injurious to the eyes.

**3.12 Odor Threshold** - This is the lowest concentration in air that most humans can detect by smell. The value cannot be relied on to prevent over-exposure, because human sensitivity to odors varies over wide limits, some chemicals cannot be smelled at toxic concentrations, odors can be masked by other odors, and some compounds rapidly deaden the sense of smell.

**3.13 IDLH Value** - The Immediately Dangerous to Life and Health Value - This concentration represents a maximum level from which one could escape within 30 minutes without any escape-impairing symptoms or any irreversible health effects. The concentrations are reported in either parts per million (ppm) or milligrams per cubic meter ( $\text{mg}/\text{m}^3$ ).

**3.14 OSHA Permissible Exposure Limit – Time Weighted Average** – Similar to the definition of the TLV-TWA above, except that this limit has been promulgated by the Occupational Safety and Health Agency.

**3.15 OSHA Permissible Exposure Limit – Short Term Exposure Limit** – Similar to the definition of the TVL-STEL above, except that this limit has been promulgated by the Occupational Safety and Health Agency.

**3.16 OSHA Permissible Exposure Limit – Ceiling** – Similar to the definition of the TVL-Ceiling above, except that this limit has been promulgated by the Occupational Safety and Health Agency.

**3.17 EPA AEGL** – Acute Exposure Guideline information from the Environmental Protection Agency for the specific compound listed in the manual.

## 4. FIRE HAZARDS

**4.1 Flash Point** - This is defined as the lowest temperature at which vapors above a volatile combustible substance will ignite in air when exposed to a flame. Depending on the test method used, the values given are either Tag closed cup (C.C.) (ASTM D56) or Cleveland open cup (O.C.) (ASTM D93). The values, along with those in 6.2 and 6.7 below, give an indication of the relative flammability of the chemical. In general, the open cup value is about 10° to 15°F higher than the closed cup value.

**4.2 Flammable Limits in Air** - The percent concentration in air (by volume) is given for the lower (LFL) and upper (UFL) limit. The values, along with those in 6.1 and 6.7, give an indication of the relative flammability of the chemical. The limits are sometimes referred to as “lower explosive limit” (LEL) and “upper explosive limit” (UEL).

**4.3 Fire Extinguishing Agents** - The agents are listed in decreasing order of importance. The general capabilities of all agents are described in section 6, “Fire Protection Handbook,” 18th ed., National Fire Protection Association, Boston, Mass., 1997.

**4.4 Fire Extinguishing Agents Not to be Used** - The agents listed must not be used because they react with the chemical and create an additional hazard. In some cases they are listed because they are ineffective in putting out the fire.

**4.5 Special Hazards of Combustion Products** - Some chemicals decompose or burn to give off toxic and irritating gases. Such gases may also be given off by chemicals that vaporize in the heat of a fire without either decomposing or burning. If no entry appears, the combustion products are thought to be similar to those formed by the burning of oil, gasoline, or alcohol; they include carbon monoxide (poisonous), carbon dioxide, and water vapor. The specific combustion products are usually not well known over the wide variety of conditions existing in fires; some may be hazardous.

**4.6 Behavior in Fire** - Any characteristic behavior that might increase significantly the hazard involved in a fire is described. The formation of dense smoke or flammable vapor clouds, and the possibility of polymerization and explosions is stated. Unusual difficulty in extinguishing the fire is also noted.

**4.7 Ignition Temperature** - This is the minimum temperature at which the material will ignite without a spark or flame being present. Along with the values in 6.1 and 6.2 above, it gives an indication of the relative flammability of the chemical. It is sometimes called the “autoignition temperature.” The method of measurement is given in ASTM D-2155.

**4.8 Electrical Hazard** - The ease with which the chemical is ignited by electrical equipment is indicated by the Group and Class assignment made in the National Fire Protection Association, “Hazardous Chemicals Data,” Boston, Mass., 1994 and in “Classification of Gases, Liquids, and Volatile Solids

Relative to Explosion-Proof Electrical Equipment,” National Academy of Sciences, 1982. This information is available for relatively few chemicals, so an absence of data does not necessarily mean that the substance is not hazardous in the presence of electrical equipment.

**4.9 Burning Rate** - The value is the rate (in millimeters per minute) at which the depth of a pool of liquid decreases as the liquid burns. Details of measurement are given by D.S. Burgess, A. Strasser, and J. Grumer, “Diffusive Burning of Liquid Fuels in Open Trays,” Fire Research Abstracts and Reviews, 3, 177 (1961).

**4.10 Adiabatic Flame Temperature** - The value is the temperature in degrees Fahrenheit of the flame when the material is burned under adiabatic conditions.

**4.11 Stoichiometric Air to Fuel Ratio** - The value is the ratio of air to the compound in question required for stoichiometric combustion. Since it is a ratio, the value is dimensionless.

**4.12 Flame Temperature** - The value is the temperature in degrees Fahrenheit of the flame produced by burning the compound under stoichiometric conditions without any rate controls.

**4.13 Molar Ratio (Reactant to Product)** – The number of moles of products formed, assuming complete combustion of a single mole of the chemical reactant. These ratios were calculated assuming there was sufficient oxygen available and that combustion did, in fact, go to completion.

**4.14 Minimum Oxygen Concentration for Combustion (MOCC)** – Information from NFPA-69 regarding the minimum percentage of oxygen required to support combustion of the subject compound. The results are reported for oxygen diluted with nitrogen (N<sub>2</sub>) and/or carbon dioxide (CO<sub>2</sub>).

## 5. CHEMICAL REACTIVITY

**5.1 Reactivity with Water** - The term “No reaction” means that no hazard results when the chemical reacts or mixes with water. Where a hazard does result, it is described.

**5.2 Reactivity with Common Materials** - This is limited to hazardous reactions with fuels and with common materials of construction such as metal, wood, plastics, cement, and glass. The nature of the hazard, such as severe corrosion or formation of a flammable gas, is described.

**5.3 Stability During Transport** - The term “Stable” means that the chemical will not decompose in a hazardous manner under the conditions of temperature, pressure, and mechanical shock that are normally encountered during shipment; the term does not apply to fire situations. Where there is a possibility of hazardous decomposition, an indication of the conditions and the nature of the hazard is given.

**5.4 Neutralizing Agents for Acids and Caustics** - In all cases involving accidental discharge, dilution with water may be followed by use of the agent specified, particularly if the material cannot be flushed away; the agent specified need not necessarily be used.

**5.5 Polymerization** - A few chemicals can undergo rapid polymerization to form sticky, resinous materials, with the liberation of much heat. The containers may explode. For these chemicals the conditions under which the reaction can occur are given. See Section 12.16 for quantitative data.

**5.6 Inhibitor of Polymerization** - The chemical names and concentrations of inhibitors added by the manufacturer to prevent polymerization are given.

## 6. WATER POLLUTION

**6.1 Aquatic Toxicity** - The form of data presentation used by the Environmental Protection Agency's "Oil and Hazardous Material-Technical Assistance Data System (OHM-TADS)" is used here. Reading from left to right and separated by slashes (/) are the following data:

Concentration in parts per million by weight (or milligrams per liter)  
at which the chemical was tested;  
Time of exposure in hours;  
Name of the aquatic species studied;  
Effect observed;  $LC_{50}$  means that approximately 50% of the fish will die under the conditions of concentrations and time given.  $TL_m$  (Median Tolerance Limit) means that approximately 50% of the fish will show abnormal behavior (including death) under the conditions of concentrations and time given; the term  $EC_{50}$  (Effective Concentration<sub>50</sub>) is used sometimes instead of  $TL_m$ ;  
The kind of water used in the test (fresh or salt)

Some chemicals have been tested with many species of fish. Where the data were available, the data sheet cites one illustrative test in fresh water and one in salt water.

**6.2 Waterfowl Toxicity** - Very little information is available. In a few cases there is entered the  $LD_{50}$  value, which indicates the dose (in milligrams per kilogram of body weight) that is lethal to about half the waterfowl tested.

**6.3 Biological Oxygen Demand (BOD)** - Also called "biochemical oxygen demand," this is a standard way of describing how much oxygen dissolved in water is consumed by biological oxidation of the chemical during the stated period of time. The unit lb/lb indicates the pounds of oxygen consumed by each pound of chemical during the time stated. When given in percent, the values indicate the pounds of oxygen consumed by each 100 pounds of chemical during the time stated. If the percentage is followed by "(theor.)", it indicates the

pounds of oxygen theoretically required to completely oxidize 100 pounds of the chemical.

**6.4 Food Chain Concentration Potential** - If the chemical is consumed by fish, marine plants, waterfowl, etc., that are in turn eaten by other species, the substance may accumulate and ultimately be consumed by humans. Where this occurs, an indication of the potential hazard and its significance is given.

**6.5 GESAMP Hazard Profile** – A composite list of hazard profiles evaluated by the Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP). A summary of the legends used in the profile follows.

**Bioaccumulation and Tainting**

+	Bioaccumulated to significant extent and known to produce a hazard to aquatic life or human health.

- XX Moderately objectionable because of the above characteristics, but short-term effects leading only to temporary interference with use of beaches; also used when there is credible scientific evidence that the substance is an animal carcinogen but where there is no clear evidence to indicate that the material has caused cancer in humans, or when there is evidence from laboratory studies that the substance could have the potential to produce other serious specific long-term adverse health effects.
- X Slightly objectionable, non-interference with use of beaches.
- 0 No problem.

Ratings in brackets, ( ), indicate insufficient data available to the GESAMP experts on specific substances, hence extrapolation was required.

N – Not applicable (e.g. if gases)

— Indicates data were not available to the GESAMP Working Group.

## **7. SHIPPING INFORMATION**

**7.1 Grades or Purity** - The grades USP (United States Pharmacopoeia) and CP (chemically pure) are quite pure. Where “Technical” or “Commercial” grades are given, the percent by weight of the pure chemical present is usually indicated. In a few cases the identity of the major impurities is given. If the properties of the less pure grades differ significantly from those of the pure substance, the differences in properties are described in general terms.

**7.2 Storage Temperature** - The range of temperatures at which the chemical is normally shipped in bulk by water transport is given. “Ambient” means the temperature of the surroundings.

**7.3 Inert Atmosphere** - The terms used are “inerted,” “padded,” “ventilated (forced),” “ventilated (natural),” and “no requirement.” They are given when found in the Code of Federal Regulations, Title 46, beginning in Part 151.05.

**7.4 Venting** - The terms used are “open,” “pressure-vacuum,” and “safety relief” (same source as 9.3 above).

**7.5 IMO Pollution Category** – pollution classification applied to this compound by the International Maritime Organization.

**7.6 Ship Type** – The data entry refers to construction and containment requirements for ships being used to transport the chemical in question. The information is taken from the Code of Federal Regulations, Title 46, Part 154.

**7.7 Barge Hull Type** – The data entry refers to structural requirements for barge hulls being used to transport the chemical in question. The information is taken from the Code of Federal Regulations, Title 46, part 151.

## **8. HAZARD CLASSIFICATIONS**

**8.1 49 CFR Category** - This is the hazard category specified in the Hazardous Materials Table, Part 172.101, Title 49 of the Code of Federal Regulations. The October 1, 1996 edition was used to prepare this version of the CHRIS.

**8.2 49 CFR Class** – The hazard class as specified in the Hazardous Materials Table, Title 49, Part 172.101 of the Code of Federal Regulations. The October 1, 1996 edition was used to prepare this version of the CHRIS.

**8.3 49 CFR Package Group** – The packaging group assigned to this chemical in the Hazardous Materials Table, Title 49, Part 172.101 of the Code of Federal Regulations. The October 1, 1996 edition was used to prepare this version of the CHRIS. Note that the packaging group is often dependent upon toxicity or flash point of the chemical. In those cases the reported packaging group is based upon the data value reported in CHRIS for that specific compound. The packaging group could be different if the purity of the material varies from that reported in CHRIS.

**8.4 Marine Pollutant** – This is a “Yes” or “No” entry, depending upon whether the chemical is listed in “List of Marine Pollutants”, Appendix B to Part 172.101, Title 49 of the Code of Federal Regulations.

**8.5 NFPA Hazard Classifications** - The indicated ratings are given in “Fire Protection Guide on Hazardous Materials,” 7th ed., National Fire Protection Association, Boston, Mass., 1978. The classifications are defined in Table 1 below. The symbol used in conjunction with these ratings is illustrated in Section 4.2.

**8.6 EPA Reportable Quantity** – The minimum quantity, in pounds, that must be reported to EPA in the event of a spill. This value is taken from “A List of Hazardous Substances and Reportable Quantities”, Appendix A to Part 172.101, Title 49 of the Code of Federal Regulations.

**8.7 EPA Pollution Category** – An alphabetic descriptor identifying the potential pollution impact of the chemical. This descriptor is based upon the reportable quantity from category 8.6 above.

**8.8 RCRA Waste Number** – The 4 character identification number assigned to this chemical, if it is a waste, under the Resources Conservation and Recovery Act. This waste number was reported if the chemical is specifically listed.

**8.9 EPA FWPCA List** – A “Yes” or “No” entry depending upon whether the chemical is listed in the Federal Water Pollution Control Act.

## 9. PHYSICAL AND CHEMICAL PROPERTIES

**9.1 Physical State at 15°C and 1 atm** - The statement indicates whether the chemical is a solid, liquid, or gas after it has reached equilibrium with its surroundings at “ordinary” conditions of temperature and pressure.

**9.2 Molecular Weight** - The value given is the weight of a molecule of the chemical relative to a value of 12 for one atom of carbon.

The molecular weight is useful in converting from molecular units to weight units and in calculating the pressure, volume and temperature relationships for gaseous materials. The ratio of the densities of any two gases is approximately equal to the ratio of their molecular weights (see 9.10).

The molecular weights of mixtures can be calculated if both the identity and quantity of each component of the mixture are known. Because the composition of mixtures described in this manual is not known exactly, or because it varies from one shipment to another, no molecular weights are given for such mixtures.

**9.3 Boiling Point at 1 atm** - The value is the temperature of a liquid when its vapor pressure is 1 atm. For example, when water is heated to 100°C (212°F) its vapor pressure rises to 1 atm and the liquid boils.

The boiling point at 1 atm indicates whether a liquid will boil and become a gas at any particular temperature and sea-level atmospheric pressure.

**9.4 Freezing Point** - The freezing point is the temperature at which a liquid changes to a solid. For example, liquid water changes to solid ice at 0°C (32°F). Some liquids solidify very slowly even when cooled below their freezing point. When liquids are not pure (for example, salt water) their freezing points are lowered slightly.

**9.5 Critical Temperature** - The maximum temperature at which a liquid can exist, no matter what the pressure on it, is called the critical temperature. For example, the critical temperature of water is 372°C (705°F). The value can be used to estimate many properties whose values are not immediately available.

**9.6 Critical Pressure** - The vapor pressure of a chemical at the critical temperature (see 9.5) is called the critical pressure. For example, the critical pressure of water is 218 atm. Values are given in pounds per square inch absolute, atmospheres, and meganewtons per square meter. The value can be used for estimating many property values that are not immediately available.

**9.7 Specific Gravity** - The specific gravity of a chemical is the ratio of the weight of the solid or liquid to the weight of an equal volume of water at 4°C (or at some other specified temperature).

If the specific gravity is less than 1.0 (or less than 1.03 in seawater) the chemical will float; if higher, it will sink. Where the change in the value with temperature is important, more data are found in 9.20.

**9.8 Liquid Surface Tension** - This property is a measure of the tensile force at the surface of a liquid that tends to shape liquid fragments into spherical drops. Values are expressed in dynes per centimeter and newtons per meter. Liquids with high surface tensions show less tendency to spread. Water has a surface tension of about 73 dynes/cm; seawater has a slightly higher value.

**9.9 Liquid-Water Interfacial Tension** - The value is a measure of the tensile forces existing at the interface between a liquid and water. Approximately, it is the difference between the individual surface tension of the liquid and that of water. Low values of the interfacial tension indicate that the chemical spreads readily on a water surface. The units are the same as in 9.8.

**9.10 Vapor (Gas) Specific Gravity** - The value is the ratio of the weight of vapor to the weight of an equal volume of dry air at the same conditions of temperature and pressure. Buoyant vapors have a vapor specific gravity less than one. The value may be approximated by the ratio  $M/29$ , where  $M$  is the molecular weight of the chemical (see 9.2).

In some cases the vapor may be at a temperature different from that of the surrounding air. For example, the vapor from a container of boiling methane at  $-172^{\circ}\text{F}$  sinks in warm air, even though the vapor specific gravity of methane at  $60^{\circ}\text{F}$  is about 0.6.

For the effect of temperature on vapor density, see 9.26.

**9.11 Ratio of Specific Heats of Vapor (Gas)** - This property is the ratio of the specific heat at constant pressure ( $C_p$ ) to the specific heat at constant volume ( $C_v$ ); its value is always greater than one. In most cases it was calculated by use of the expression:

$$\frac{C_p}{C_v} = \frac{C_p}{(C_p - R)}$$

where  $R$  is the Universal Gas Constant.

The ratio varies slightly with temperature; the value given is at  $20^{\circ}\text{C}$  ( $68^{\circ}\text{F}$ ). The ratio is often of value in estimating temperature changes when gases are compressed or expanded. Higher values of the ratio lead to larger temperature changes for a given pressure change.

**9.12 Latent Heat of Vaporization** - The value is the heat that must be added to the specified weight of a liquid before it can change to vapor (gas). It varies with temperature; the value given is that at the boiling point at 1 atm (see 9.3). The units used are Btu per pound, calories per gram, and joules per kilogram.

No value is given for chemicals with very high boiling points at 1 atm, because such substances are considered essentially nonvolatile.

**9.13 Heat of Combustion** - The value is the amount of heat liberated when the specified weight is burned in oxygen at 25°C. The products of combustion, including water, are assumed to remain as gases; the value given is usually referred to as the “lower heat value.” The negative sign before the value indicates that heat is given off when the chemical burns. Units are the same as in 9.12.

**9.14 Heat of Decomposition** - The value is the amount of heat liberated when the specified weight decomposes to more stable substances. The value is given for very few chemicals, because most are stable and do not decompose under the conditions of temperature and pressure encountered during shipment. The negative sign before the value simply indicates that heat is given off during the decomposition. The value does not include heat given off when the chemical burns. Units are the same as in 9.12.

**9.15 Heat of Solution** - The value represents the heat liberated when the specified weight of chemical is dissolved in a relatively large amount of water at 25°C (“infinite dilution”). A negative sign before the value indicates that heat is given off, causing a rise in temperature. (A few chemicals absorb heat when they dissolve, causing the temperature to fall.) Units are the same as in 9.12.

In those few cases where the chemical reacts with water and the reaction products dissolve, the heat given off during the reaction is included in the heat of solution.

**9.16 Heat of Polymerization** - The value is the heat liberated when the specified weight of the compound (usually called the monomer) polymerizes to form the polymer. In some cases the heat liberated is so great that the temperature rises significantly, and the material may burst its container or catch fire. The negative sign before the value indicates that heat is given off during the polymerization reaction. Units are the same as in 9.12.

**9.17 Heat of Fusion** - The value is the number of Btu needed to change one pound of solid to liquid with no change in temperature.

**9.18 Limiting Value** - A chemical specific concentration in water in mole fraction units below which the contribution to the evolution of toxic or flammable vapor at the water surface can be assumed to be negligible.

**9.19 Reid Vapor Pressure** - The value is the equilibrium pressure exerted by vapor over the liquid at 100°F., expressed as pounds per square inch absolute, as defined in 46 CFR 30.10-59.

Items 9.20 through 12.27 consist of tables. The temperature is given in one column followed by the appropriate data value in the next column.

**9.20 Saturated Liquid Density** - The value is the weight (in pounds) of one cubic foot of liquid that is in equilibrium with its vapor. Liquid densities decrease slightly with an increase in temperature; where literature data or reliable estimation methods were applicable, a table shows this effect.

**9.21 Liquid Heat Capacity** - The value is the heat (in Btu) required to raise the temperature of one pound of the liquid one degree Fahrenheit at constant pressure. For example, it requires almost 1 Btu to raise the temperature of 1 pound of water from 68°F to 69°F. The value is useful in calculating the increase in temperature of a liquid when it is heated, as in a fire. The value increases slightly with an increase in temperature; the table shows this effect.

**9.22 Liquid Thermal Conductivity** - The value is a measure of the ability of a liquid to conduct heat. It represents the number of Btu per hour that pass through an area of liquid one square foot in cross-section when the temperature gradient is 1°F per inch of depth. Higher values indicate that the liquid conducts heat more readily.

Liquid thermal conductivities decrease slightly with an increase in temperature. Where applicable, the table shows this effect.

A basic law of heat conduction states that the energy flow per unit area per unit time is proportional to the gradient in temperature. The constant of proportionality is the liquid thermal conductivity.

**9.23 Liquid Viscosity** - The value (in centipoise) is a measure of the ability of a liquid to flow through a pipe or hole; higher values indicate that the liquid flows less readily under a fixed pressure head. For example, heavy oils have higher viscosities (i.e., are more viscous) than gasoline.

Liquid viscosities decrease rapidly with an increase in temperature. In some cases a table is given to show the effect. In other cases only a single data point was found in the literature.

A basic law of fluid mechanics states that, for most fluids, the force per unit area needed to shear a fluid is proportional to the velocity gradient. The constant of proportionality is the viscosity.

**9.24 Solubility in Water** - The value represents the pounds of a chemical that will dissolve in 100 pounds of pure water. Solubility usually increases when the temperature increases; where the change has been measured, a table is given to show the effect. The following terms are used when numerical data are either unavailable or not applicable:

The term "Miscible" means that the chemical mixes with water in all proportions. The term "Reacts" means that the substance reacts chemically with water; thus, its solubility has no real meaning. "Insoluble" usually means that very little of the chemical dissolves in 100 pounds of water. (Weak solutions of "Insoluble" materials may still be hazardous to humans, fish, and waterfowl, however.)

**9.25 Saturated Vapor Pressure** - The value is the pressure (in pounds per square inch absolute) of the vapor in equilibrium with the liquid form at the specified temperature. Vapor pressure values can be used to estimate the relative volatility of chemicals at a given temperature, and to calculate the pressure over a liquid that is shipped in a closed container.

The vapor pressure increases as temperature increases; a table is given to show this effect. Note that the vapor pressure scale is logarithmic.

**9.26 Saturated Vapor Density** - The value is the weight (in pounds) of one cubic foot of vapor that is in equilibrium with the liquid form.

If it is assumed that the vapor behaves as an ideal gas, the relation  $pM/RT$  holds, where  $p$  is the vapor pressure,  $M$  is the molecular weight,  $R$  is the gas constant, and  $T$  is the temperature (in absolute units).

Since the vapor pressure varies with temperature (see 9.25), the saturated vapor density also varies with temperature, as shown on the table.

**9.27 Ideal Gas Heat Capacity** - The value is the number of Btu needed to raise the temperature of one pound of gas by 1° Fahrenheit. The property can be used only when the pressure of the gas is less than about 10 atm. The ideal gas heat capacity is not a function of pressure (below about 10 atm), but it does increase with temperature, and a table is given to show the effect.

## **4. OTHER INFORMATION SYSTEMS**

### **4.1 CHEMICAL TRANSPORTATION EMERGENCY CENTER (CHEMTREC)**

The Manufacturing Chemists Association operates CHEMTREC 24 hours a day. By calling the appropriate toll-free number listed below, one can consult experts on chemicals and spill response.

Continental United States, Alaska,	
Hawaii, and Canada .....	800-424-9300
District of Columbia .....	202-483-7616

### **4.2 NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)**

The NFPA's "Recommended System for the Identification of the Fire Hazards of Materials" (NFPA No. 704M) provides basic warning information to fire fighter in industrial plants and storage facilities. This system uses a diamond-shaped warning symbol. The top, left, and right boxes refer to flammability, health, and reactivity hazards respectively and contain a number from 0 to 4. The exact meaning of each number is explained in Section 3 (para 12.3) of this manual, and the applicable number for each chemical are listed in Section 11 under "NFPA Hazard Classifications." The bottom box is used for special hazards; the most common of these is a warning against the use of water, indicated by the symbol W.

### **4.3 INTERNATIONAL MARITIME ORGANIZATION (IMO)**

Foreign vessels using U.S. waterways generally utilize, in addition to U.S. requirements, an international labeling system developed by IMO. This system consists of 15 diamond-shaped labels. Each identifies a particular hazard by a descriptive picture, a word, and a distinctive color.

The number at the bottom of each diamond identifies the class to which IMO has assigned the chemical and is the same as the first digit in the IMO/UN numerical designation, one of the items given under "Chemical Designations" in Section 11 of this manual.

### **4.4 DEPARTMENT OF TRANSPORTATION (DOT)**

The "1996 North American Emergency Response Guidebook" was developed by DOT as a guide for initial actions to be taken when handling incidents involving hazardous materials. The guidebook identifies the most significant potential hazards and gives information and guidance for initial actions to be taken based upon the material involved. Information can be located in the guidebook based upon chemical name or DOT Identification Number.

#### **4.5 OHM-TADS (EPA)**

The Oil and Hazardous Materials Technical Assistance Data System (OHM-TADS) has been developed by the Environmental Protection Agency (EPA) to provide information on physical and chemical properties, hazards, pollution characteristics, and shipping information for over 1200 hazardous materials. OHM-TADS consists of a computerized data base which can be accessed from terminals at the 10 EPA Regional Offices, from EPA Headquarters in Washington, D.C., and from Coast Guard Marine Safety Offices. The System can provide either information on specifically requested properties for a material, or it can print all the information in its files for that material.

Some of the same information appears in both this manual and OHM-TADS, but each contains some information not found in the other.

#### **4.6 POISON CONTROL CENTERS**

Throughout the country, local Poison Control Centers are maintained at hospitals. These Centers can provide information on the chemical composition, appearance, and toxicity of common poisonous materials as well as information on the symptoms of exposure and on the emergency procedures recommended in the event of exposure. The information available at these centers deals mainly with common household materials.

Poison Control Centers are coordinated through the Department of Health and Human Services in Washington, D.C., but information should be requested through the local centers.

The telephone number of the local Poison Control Center can be found in a local telephone directory.

#### **4.7 ASSOCIATION OF AMERICAN RAILROADS (AAR)**

The AAR has developed emergency action guides for 134 various commodities. The guides are contained in a single binder and provide technical information as well as response guidance.

## **6. SELECTED PROPERTIES OF FRESH WATER, SEA WATER, ICE AND AIR**

The following properties are useful for engineering calculations described in the Hazard Assessment Handbook. The values for fresh water are those recorded for pure water. The values for the water of lakes and streams differ somewhat from those of pure water, but since no "standard" fresh water has ever been defined, the values for pure water must be used.

A "standard" sea water has been defined as one containing 35 grams of salts per kilogram of solution. The values for the water of tidal estuaries differ somewhat from those of "standard" sea water because the water has a salinity somewhere between those of fresh and sea waters.

The value for the density of air was derived from the ideal gas law; the air is assumed to be dry and at 1 atmosphere pressure.

## 7. GUIDE TO COMPATIBILITY OF CHEMICALS

The Guide is based in part upon information provided to the Coast Guard by the National Academy of Sciences - U.S. Coast Guard Advisory Committee on Hazardous Materials and represents the latest information available to the Coast Guard on chemical compatibility.

The accidental mixing of one chemical cargo with another can in some cases be expected to result in a vigorous and hazardous chemical reaction. The generation of toxic gases, the heating, overflow, and rupture of cargo tanks, and fire and explosion are possible consequences of such reactions.

The purpose of the Compatibility Chart is to show chemical combinations believed to be dangerously reactive in the case of accidental mixing. It should be recognized, however, that the Chart provides a broad grouping of chemicals with an extensive variety of possible binary combinations. Although one group, generally speaking, can be considered dangerously reactive with another group where an "X" appears on the Chart, there may exist between the groups some combinations which would not dangerously react. The Chart should therefore not be used as an infallible guide. It is offered as an aid in the safe loading of bulk chemical cargoes, with the recommendation that proper safeguards be taken to avoid accidental mixing of binary mixtures for which an "X" appears on the Chart. Proper safeguards would include consideration of such factors as avoidance of the use of common cargo and vent lines and carriage in adjacent tanks having a common bulkhead.

The following procedure explains how the Guide should be used in determining compatibility information:

- (1) Determine the reactivity group of a particular product by referring to the alphabetical list in Table 7.1.
- (1) Enter the Chart with the reactivity group. Proceed across the page. An "X" indicates a reactivity group that forms an unsafe combination with the product in question.

For example, crotonaldehyde is listed in Table 7.1 as belonging in Group 19 (Aldehydes) and also has a notation, (2), which is explained in the footnotes to Table 7.1. The Compatibility Chart shows that chemicals in group 19 should be segregated from sulfuric and nitric acids, caustics, ammonia, and all types of amines (aliphatic, alkanol, and aromatic). Footnote (2), refers the user to Table 7.3 where exceptions to the Compatibility Chart are listed. Here, crotonaldehyde is listed as also being incompatible with Group 1, non-oxidizing acids.

It is recognized that there are wide variations in the reaction rates of individual chemicals within the broad groupings shown reactive by the Compatibility Chart. Some individual materials in one group will react violently with some of the materials in another group and cause great hazard; others will react slowly, or not at all. Accordingly, a useful addition to the Guide would be the identification of specific materials which might not follow the characteristic reactivities of the rest of the materials in its Group. A few such combinations are listed in Table 7.3; as other exceptions to the Chart become known, they will be listed in subsequent revisions of this manual.

## 10. DATA SOURCES

The source of every item of data contained in section 11 is recorded in master data files and is available on request. The principal sources are listed below. Many other sources were consulted, but most of them provided only a few items and are not given here. In a few cases the information given is based on an analogy with that for a closely related chemical; the analogy was drawn by an expert in the field, whose identity appears in the master data files.

Where a source was used for a single category of data, the source is given in Section 3 ("Explanation of Terms") and is not repeated here.

### 10.1 GENERAL SOURCES

The following sources contained data for many of the 13 data categories used:

1. Manufacturers' Technical Bulletins - This is usually the best single source of general information about the chemical. The bulletins contain the most recent data. Bulletins were not available for a few chemicals that are not items of commerce but are intermediates shipped from one manufacturing site to another.
2. Material Safety Data Sheets - These were provided by the manufacturer using the U.S. Department of Labor Form OSHA-20 or an approved modification.
3. Code of Federal Regulations - Office of the Federal Register, Archives and Record Service, Washington, D.C., 1972. Titles 46 (Shipping) and 49 (Transportation) were used in the most recent revision available, October 1, 1996.

INGESTION: if ingested, immediately give large amounts of water (or milk if immediately available), then induce vomiting and get medical help. EYES: immediately flush with plenty of water for at least 15 min. and get medical help promptly. SKIN: immediate, continuous, and thorough washing in flowing water is imperative, preferably deluge shower with abundant soap; if burns are present, get medical help; discard all contaminated clothing and wearing accessories.

Irritating gases are produced when heated.  
Flashback along vapor trail may occur.  
Vapor may explode if ignited in an enclosed area.  
Wear goggles, self-contained breathing apparatus and rubber overclothing (including gloves).  
Extinguish with dry chemicals or carbon dioxide.  
DO NOT USE WATER ON FIRE.

### Exposure

#### CALL FOR MEDICAL AID.

#### VAPOR

Irritating to eyes, nose and throat.  
If inhaled will cause difficult breathing.  
If in eyes, hold eyelids open and flush with plenty of water.  
If breathing has stopped, give artificial respiration.  
If breathing is difficult, give oxygen.

#### LIQUID

Will burn skin and eyes.  
Harmful if swallowed.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### Water Pollution

Effect of low concentrations on aquatic life is unknown.  
May be dangerous if it enters water intakes.  
Notify local health and wildlife officials.  
Notify operators of nearby water intakes.

Shut off ignition sources. Call fire department. Evacuate area in case of large discharge. Avoid contact with liquid and vapor; avoid inhalation. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	<b>FLAMMABLE.</b> POISONOUS GASES MAY BE PRODUCED IN FIRE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles, self-contained breathing apparatus and rubber overclothing (including gloves). Extinguish with dry chemicals, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	Call for medical aid.  <b>VAPOR</b> Irritating to eyes, nose and throat. If inhaled will cause headache, dizziness, coughing or difficult breathing. Move victim to fresh air. If breathing is difficult, give oxygen.  <b>LIQUID</b> Irritating to skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Ethine Ethyne	Compressed gas      Colorless      Mild garlic odor  This flammable gas is slightly lighter than air, and will disperse slowly unless confined.
Shut off ignition sources and call fire department. Stop discharge if possible. Keep people away. Avoid inhalation. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Containers may explode in fire. Flashback along gas trail may occur. May explode if ignited in an enclosed area. Stop flow of gas if possible. Cool exposed containers and protect men effecting the shutoff with water. Let fire burn.
<b>Exposure</b>	CALL FOR MEDICAL AID. GAS Not irritating to eyes, nose or throat. If inhaled will cause headache, difficult breathing, or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.
<b>Water Pollution</b>	Not harmful to aquatic life.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Cyanoethylene Fumigrain Ventox Vinyl cyanide	Watery liquid      Colorless to light yellow      Irritating odor  Floats on water. Poisonous, flammable vapor is produced.
<p><b>AVOID CONTACT WITH LIQUID AND VAPOR. KEEP PEOPLE AWAY.</b>  Wear goggles, self-contained breathing apparatus and rubber overclothing (including gloves).  Shut off ignition sources and call fire department.  Stop discharge if possible.  Stay upwind and use water spray to "knock down" vapor.  Evacuate area in case of large discharge.  Isolate and remove discharged material.  Notify local health and pollution control agencies; protect water intakes.</p>	
<b>Fire</b>	<b>FLAMMABLE.</b> <b>POISONOUS GASES MAY BE PRODUCED IN FIRE.</b> Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Combat fires from a safe distance or protected location. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	<b>CALL FOR MEDICAL AID.</b>  <b>VAPOR</b> <b>POISONOUS IF INHALED.</b> Irritating to eyes. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  <b>LIQUID</b> <b>POISONOUS IF SWALLOWED</b> Irritating to skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	<b>HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS.</b> Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Dimethyl ketone Propanone 2-Propanone	Watery liquid      Colorless      Sweet odor  Floats and mixes with water. Flammable, irritating vapor is produced.
Stay upwind and use water spray to "knock down" vapor. Shut off ignition sources and call fire department. Keep people away. Stop discharge if possible. Isolate and remove discharged material. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	<b>FLAMMABLE.</b> Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	<b>DO NOT INDUCE VOMITING</b> <b>CALL FOR MEDICAL AID.</b>  <b>VAPOR</b> Irritating to eyes, nose and throat. If inhaled, may cause difficult breathing or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  <b>LIQUID</b> Irritating to eyes. Not irritating to skin. IF IN EYES, hold eyelids open and flush with plenty of water.
<b>Water Pollution</b>	Dangerous to aquatic life in high concentrations. May be dangerous if it enters water intakes. Notify local health and pollution control officials. Notify operators of nearby water intakes.

- 3.2 **Symptoms Following Exposure:** At low dosages the earliest symptoms may be weakness, headaches, confusion and occasionally nausea and vomiting. Respiratory rate and depth will usually be increased at the beginning and at later stages become slow and gasping.
- 3.3 **Treatment of Exposure:** Call a physician for all cases of exposure. INHALATION: remove victim to fresh air. (Rescuer should wear suitable mask.) INGESTION: if victim is conscious, induce vomiting by having him drink strong salt water. SKIN: remove contaminated clothing and wash affected skin thoroughly with soap and water. EYES: hold eyelids apart and wash with continuous, gentle stream of water for at least 15 min. If breathing has stopped, give artificial respiration until physician arrives. If victim is unconscious, administer amyl nitrite by crushing an ampule in a cloth and holding it under his nose for 15 seconds in every minute. Do not interrupt artificial respiration during this procedure. Replace ampule when its strength is spent; continue treatment until victim's condition improves or physician arrives.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Amyl acetate, mixed isomers Acetic acid, n-amyl ester Pentyl acetates	Watery liquid	Colorless to yellow	Banana odor
Floats on water. Flammable, irritating vapor is produced.			
<b>Shut off ignition sources and call fire department.</b> <b>Stop discharge if possible. Keep people away.</b> <b>Avoid contact with liquid and vapor.</b> <b>Stay upwind and use water spray to "knock down" vapor.</b> <b>Isolate and remove discharged material.</b> <b>Notify local health and pollution control agencies.</b> <b>Protect water intakes.</b>			
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause nausea, headache or dizziness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water.		
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and pollution control officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 2-Propen-1-ol Vinyl carbinol	Watery liquid      Colorless      Sharp mustard odor  Floats and mixes with water. Poisonous, flammable vapor is produced.
AVOID CONTACT WITH LIQUID AND VAPOR. KEEP PEOPLE AWAY. Shut off ignition sources and call fire department. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Stop discharge if possible. Stay upwind and use water spray to "knock down" vapor. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	FLAMMABLE. POISONOUS GASES MAY BE PRODUCED IN FIRE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR POISONOUS IF INHALED OR IF SKIN IS EXPOSED. Irritating to eyes, nose and throat. Move to fresh air. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Will burn eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 3-Chloropropene 3-Chloropropylene	Liquid Colorless to yellowish brown or red Sharp, irritating odor Floats on water. Flammable, irritating vapor is produced.
Avoid contact with liquid and vapor. Keep people away. Shut off ignition sources and call fire department. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Stop discharge if possible. Stay upwind and use water spray to "knock down" vapor. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	<b>FLAMMABLE.</b> POISONOUS GASES ARE PRODUCED IN FIRE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Extinguish with dry chemical, alcohol foam, or carbon dioxide. Cool exposed containers with water.
<b>Exposure</b>	<b>CALL FOR MEDICAL AID.</b> VAPOR POISONOUS IF INHALED OR IF SKIN IS EXPOSED. Irritating to eyes, nose and throat. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen. LIQUID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Will burn eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** During prolonged exposure to mixing and loading operations, wear clean synthetic rubber gloves and mask or respirator of the type passed by the U.S. Bureau of Mines for aldrin protection.
- 3.2 **Symptoms Following Exposure:** Ingestion, inhalation, or skin absorption of a toxic dose will induce nausea, vomiting, hyperexcitability, tremors, epileptiform convulsions, and ventricular fibrillation. Aldrin may cause temporary reversible kidney and liver injury. Symptoms may be seen after ingestion of less than 1 gram in an adult; ingestion of 25 mg has caused death in children.
- 3.3 **Treatment of Exposure:** SKIN CONTACT: wash with soap and running water. If material gets into eyes, wash immediately with running water for at least 15 minutes; get medical attention. INGESTION: call physician immediately; induce vomiting immediately. Repeat until vomit fluid is clear. Never give anything by mouth to an unconscious person. Keep patient prone and quiet. PHYSICIAN: administer barbituates as anti-convulsant therapy. Observe patient carefully because repeated treatment may be necessary.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Liquid ammonia	Liquefied compressed gas Colorless Ammonia odor  Floats and boils on water. Poisonous, visible vapor cloud is produced.
Avoid contact with liquid and vapor. Keep people away. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Stop discharge if possible. Stay upwind and use water spray to "knock down" vapor. Call fire department. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Combustible. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Stop flow of gas or liquid if possible. Cool exposed containers and protect men effecting shutoff with water. Let fire burn.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR POISONOUS IF INHALED. Irritating to eyes, nose and throat. Move to fresh air. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn skin and eyes. Harmful if swallowed. Will cause frostbite. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. DO NOT RUB AFFECTED AREAS. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

Contact of the liquid with skin freezes the tissue and then produces a caustic burn.
- 3.3 **Treatment of Exposure:** INHALATION: move victim to fresh air and give artificial respiration if necessary. Oxygen may be useful. Observe for laryngeal spasm and perform tracheostomy if indicated. SKIN OR EYES: flood immediately with running water for 15 min. Treat subsequently as thermal burn.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Ammonia solution Ammonia water Aqua ammonia Aqueous ammonia Household ammonia	Watery liquid      Colorless      Ammonia odor  Floats and mixes with water. Irritating vapor is produced.
Avoid contact with liquid and vapor. Keep people away. Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Stop discharge if possible. Evacuate. Stay upwind and use water spray to "knock down" vapor. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Not flammable.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to skin, eyes, nose and throat. If inhaled, will cause nausea, vomiting, difficult breathing, or loss of consciousness. Move to fresh air. IF IN EYES, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.  HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Rubber boots, gloves, apron, and coat; broad-brimmed rubber or felt hat; safety goggles. Use of protective oil will reduce skin irritation from ammonia.
- 3.2 **Symptoms Following Exposure:** Contact of liquid or vapor with skin, mucous membranes, lungs, or gastroenteric tract causes marked local irritation. Ingestion causes burning pain in mouth, throat, stomach, and thorax, constriction of throat, and coughing. This is soon followed by vomiting of blood or by passage of loose stools containing blood. Breathing difficulty, convulsions, and shock may result. Brief exposure to 5000 ppm or ingestion of 3-4 ml may be fatal.
- 3.3 **Treatment of Exposure:** INHALATION: give artificial respiration and oxygen if needed; enforce rest. INGESTION: do NOT induce vomiting; lavage stomach with water or lemon juice, milk, or demulcents; delay may cause perforation of esophagus or stomach; swelling of glottis may necessitate tracheostomy. EYES OR SKIN: wash with plenty of water.
- 3.4 **TLV-TWA:** 25 ppm as ammonia.
- 3.5 **TLV-STEL:** Not listed.
- 3.6 **TLV-Ceiling:** 35 ppm as ammonia.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Aminobenzene Aniline oil Benzenamine Blue oil Phenylamine	Oily liquid  Colorless to yellowish brown  Amine odor  Sinks slowly in water.
<b>AVOID CONTACT WITH LIQUID AND VAPOR. KEEP PEOPLE AWAY.</b> Wear chemical protective suit with self-contained breathing apparatus. Stop discharge if possible. Stay upwind and use water spray to "knock down" vapor. Call fire department. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Combustible. POISONOUS GAS IS PRODUCED WHEN HEATED. Vapor may explode if ignited in an enclosed area. Wear chemical protective suit with self-contained breathing apparatus. Extinguish with water, dry chemical, foam, or carbon dioxide. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  LIQUID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Irritating to eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	Dangerous to aquatic life in high concentrations. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

If in eyes, hold eyelids open and flush with plenty of water.  
If breathing has stopped, give artificial respiration.  
If breathing is difficult, give oxygen.

SOLID  
Irritating to skin and eyes.  
Harmful if swallowed.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### Water Pollution

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Antimony (V) chloride Antimony perchloride	Liquid      Colorless to brown      Unpleasant odor  Sinks in water. Irritating vapor is produced. Freezing point is 37°F.
Avoid contact with liquid. Keep people away. Wear rubber overclothing (including gloves). Stop discharge if possible. Evacuate. Isolate and remove discharged material. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Not flammable. POISONOUS GASES ARE PRODUCED WHEN HEATED. DO NOT USE WATER ON ADJACENT FIRES.
<b>Exposure</b>	Call for medical aid.  VAPOR Irritating to eyes, nose and throat. If inhaled will cause coughing or difficult breathing. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn skin and eyes. If swallowed will cause nausea, vomiting or loss of consciousness. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Chemical safety goggles and face shield; self-contained breathing apparatus, positive-pressure hose mask, airline mask or industrial canister-type gas mask; rubber safety shoes; clothing made of rubber or other impervious material.
- 3.2 **Symptoms Following Exposure:** Inhalation causes irritation of nose and throat, a feeling of pressure in the chest, and shortness of breath. Nausea and vomiting commonly occur. Loss of consciousness if exposure has been sufficiently great. Congestion in the chest may be present in varying amounts, and fluid may collect in the lungs (pulmonary edema) of severely exposed persons. Vapor also causes severe eye irritation (redness, weeping, and swelling of lids); liquid burns eyes, contact with skin causes reddening or blistering. Ingestion causes severe irritation of mouth and stomach.
- 3.3 **Treatment of Exposure:** Keep patient warm; if he is conscious, give coffee; call physician after all exposures to this compound. **INHALATION:** remove patient to fresh air; if breathing becomes difficult, give oxygen. If breathing has stopped, start artificial respiration. **EYES:** immediately flush with plenty of water for at least 15 min. If medical attention is not immediately available, continue eye irrigation for another 15-min. period. Upon completion of the first 15 min. of irrigation, it is permissible to instill 2 or 3 drops of an effective aqueous local eye anesthetic for relief of pain. No oils or ointments should be used unless ordered by the physician. **SKIN:** flush at once with large volumes of water. Wash thoroughly with soap and large quantities of running water. **INGESTION:** have victim drink large amounts of water. Induce vomiting by sticking a finger down the throat or by giving salt water (one tablespoon of table salt to a glass of water). Keep patient warm and quiet.
- 3.4 **TLV-TWA:** 0.1 ppm  
3.5 **TLV-STEL:** Not listed.  
3.6 **TLV-Ceiling:** 0.3 ppm (Notice of Intended Change to 0.1 ppm).  
3.7 **Toxicity by Ingestion:** Grade 4; LD<sub>50</sub> below 50 mg/kg  
3.8 **Toxicity by Inhalation:** Currently not available.  
3.9 **Chronic Toxicity:** Grade 4; oral rat LD<sub>50</sub> = 46 mg/kg. Grade 4; oral rabbit LD<sub>50</sub> = 7 mg/kg  
3.10 **Vapor (Gas) Irritant Characteristics:** Vapors cause severe irritation of eyes and throat and can cause eye and lung injury. They cannot be tolerated even at low concentrations.  
3.11 **Liquid or Solid Characteristics:** Causes smarting of the skin and first-degree burns on short exposure; may cause second-degree burns on long exposure.  
3.12 **Odor Threshold:** 0.21 ppm  
3.13 **IDLH Value:** 2 ppm

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Ammonium fluosilicate	Solid  White  Odorless  Sinks and mixes slowly with water.
AVOID CONTACT WITH SOLID AND DUST. KEEP PEOPLE AWAY. Wear dust respirator and rubber overclothing (including gloves). Avoid inhalation. Stop discharge if possible. Isolate and remove discharged material. Notify local health and pollution control agencies.	
<b>Fire</b>	Not flammable. POISONOUS GASES MAY BE PRODUCED IN FIRE. Irritating gases may be produced when heated. Wear goggles and self-contained breathing apparatus.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST POISONOUS IF INHALED OR IF SKIN IS EXPOSED. If inhaled will cause coughing or difficult breathing. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  SOLID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Will burn skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> tert-Pentyl acetate	Watery liquid Colorless to yellow Banana odor  Floats on water. Flammable, irritating vapor is produced.
Restrict access. Shut off ignition sources and call fire department. Avoid contact with liquid and vapor. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles and self-contained breathing apparatus. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR. Irritating to eyes, nose, and throat. If inhaled, will cause nausea, headache, or dizziness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID. Irritating to skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and pollution control officials. Notify operators of nearby water intakes.

INGESTION: obtain medical attention as soon as possible; if the patient is conscious, induce vomiting by giving warm salty water (2 tablespoons of table salt to a pint of water) or warm soapy water; if this measure is unsuccessful, vomiting may be induced by tickling the back of the patient's throat with a finger; vomiting should be encouraged about three times or until the vomitus is clear; additional water may be given to wash out the stomach. EYES: immediately flush the eyes with large quantities of running water for a minimum of 15 min.; hold the eyelids apart during the irrigation to ensure flushing of the entire surface of the eye and lids with water; obtain medical attention as soon as possible; continue the irrigation for an additional 15 min. if the physician is not available. SKIN: immediately flush affected area with water; remove contaminated clothing under the shower; continue washing with water-do not attempt to neutralize with chemical agents; obtain medical attention unless burn is minor.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 2-Butanol Butylene hydrate 2-Hydroxybutane Methyl ethyl carbinol	Watery liquid      Colorless      Alcohol odor  Floats and mixes slowly with water. Flammable, irritating vapor is produced.
Restrict access. Shut off ignition sources and call fire department. Avoid contact with liquid and vapor. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause headache, dizziness or difficult breathing. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to eyes. If in eyes, hold eyelids open and flush with plenty of water.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and pollution control officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> n-Bromobutane Butyl bromide n-Butyl bromide		Liquid  Colorless to pale yellow  Sinks in water.
Avoid contact with liquid or vapor. Keep people away. Wear self-contained breathing apparatus and full protective clothing. Shut off all sources of ignition. Call fire department. Notify local health and pollution control agencies. Protect water intakes.		
<b>Fire</b>	<b>FLAMMABLE</b> Water may be ineffective against fire. Flashback along vapor trail may occur. Wear self-contained breathing apparatus and full protective clothing. Extinguish with dry chemical, CO <sub>2</sub> , or foam.	
<b>Exposure</b>	CALL FOR MEDICAL AID.  <b>VAPOR</b> May be harmful if inhaled or absorbed through skin. Irritating to the eyes, upper respiratory tract, nose and throat. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  <b>LIQUID</b> Irritating to eyes and skin. May be harmful if swallowed or absorbed through the skin. Remove contaminated clothing and shoes. Flush affected areas with water. Wash with soap and water. IF IN EYES: immediately flush with water for at least 15 minutes. IF SWALLOWED and victim is CONSCIOUS: have victim drink water and induce vomiting IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS: do nothing except keep victim warm.	
<b>Water Pollution</b>	Effects of low concentrations on aquatic life are not known. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

# N-BUTYL ACETATE

BCN

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Acetic acid, n-butyl ester Butyl acetate Butyl ethanoate			
Watery liquid	Colorless	Pleasant fruity odor	
Floats on water. Flammable irritating vapor is produced.			
Restrict access. Shut off ignition sources and call fire department. Avoid contact with liquid and vapor. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies. Protect water intakes.			
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause nausea, dizziness, headache or difficult breathing. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk, and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.		
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and pollution control officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

### Common Synonyms

Solid White to green Sharp odor

Sinks and mixes violently with water.

Restrict access.  
AVOID CONTACT WITH SOLID AND DUST.  
Wear dust respirator and rubber overclothing (including gloves).  
Notify local health and pollution control agencies.  
Protect water intakes.

### Fire

Not flammable.  
Irritating gases may be produced when heated.  
Wear goggles and self-contained breathing apparatus.  
DO NOT USE WATER ON ADJACENT FIRES.

### Exposure

CALL FOR MEDICAL AID.  
DUST  
POISONOUS IF INHALED OR IF SKIN IS EXPOSED.  
If inhaled will cause coughing, difficult breathing, or loss of consciousness.  
If in eyes, hold eyelids open and flush with plenty of water.  
If breathing has stopped, give artificial respiration.  
If breathing is difficult, give oxygen.

SOLID  
POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED.  
Will burn skin and eyes.  
If swallowed will cause nausea, coughing, or loss of consciousness.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### Water Pollution

HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS.  
May be dangerous if it enters water intakes.  
Notify local health and wildlife officials.  
Notify operators of nearby water intakes.

Avoid contact with vapors and liquid. Keep people away. Evacuate. Wear self-contained positive pressure breathing apparatus and full protective clothing. Stay upwind; keep out of low areas. Shut off ignition sources. Call fire department. Stop leak if you can do it without risk. Notify local health and pollution control agencies. Protect water intakes.			
<b>Fire</b>	COMBUSTIBLE. May be ignited by heat, sparks or flames. Container may explode in heat or fire. Runoff to sewer may create fire or explosion hazard. Fire may produce irritating or poisonous gases. Extinguish fires with dry chemical, CO <sub>2</sub> , water spray or alcohol foam. For massive fire in cargo area, use unmanned hose holder or monitor nozzles. If fire can be controlled, cool container with water from unmanned hose holder or monitor nozzles until after fire is out. If this is impossible, withdraw from area and let fire burn.		
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Vapor extremely irritating. Contact of vapor with eyes may cause blindness. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Harmful if swallowed or absorbed through skin. IF IN EYES: hold eyelids open, flush with running water for at least 15 minutes. Flush affected areas with plenty of water. Wash skin with soap and water. Remove and isolate contaminated clothing and shoes at the site. IF SWALLOWED: keep victim quiet and maintain normal body temperature.		
<b>Water Pollution</b>	Effects of low concentrations on aquatic life are not known. May be harmful if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Benzol Benzole	Watery liquid      Colorless      Gasoline-like odor  Floats on water. Flammable, irritating vapor is produced. Freezing point is 42°F.
Restrict access. Avoid contact with liquid and vapor. Wear goggles and self-contained breathing apparatus. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles and self-contained breathing apparatus. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause headache, difficult breathing, or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

### Exposure

CALL FOR MEDICAL AID.  
DUST  
POISONOUS IF INHALED.  
Irritating to eyes, nose and throat.  
Move victim to fresh air.  
If in eyes, hold eyelids open and flush with plenty of water.  
If breathing is difficult, give oxygen.

SOLID  
POISONOUS IF SWALLOWED.  
Irritating to skin and eyes.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### Water Pollution

# BENZENESULFONYL CHLORIDE

BSC

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Benzene sulfochloride Benzenesulfochloride Benzene sulfonechloride Benzenesulfonic (acid) chloride	Liquid  Colorless  Pungent  Sinks in water and slowly decomposes. Melting point is 58.1°F.
<b>AVOID CONTACT WITH LIQUID AND VAPOR. KEEP PEOPLE AWAY.</b> Wear positive pressure breathing apparatus and special protective clothing. Shut off ignition sources and call fire department. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Combustible. Poisonous gases are produced in fires or when heated. Containers may explode in fire. Wear positive pressure breathing apparatus and special protective clothing. Extinguish small fires: dry chemical, CO <sub>2</sub> , water spray or foam; large fires: with water spray, fog or foam. Move containers from fire area if you can do it without risk.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR May be fatal if inhaled. Irritating to eyes, skin and mucous membranes. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn skin and eyes. May be fatal if swallowed or absorbed through skin. IF IN EYES OR ON SKIN, flush with running water for at least 15 min.; hold eyelids open if necessary. Wash skin with soap and water. Remove and isolate contaminated clothing and shoes at the site. Maintain normal body temperature and keep victim quiet. Hold victim for observation for delayed effects. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

DO NOT USE WATER ON ADJACENT FIRES.

### Exposure

CALL FOR MEDICAL AID.

VAPOR  
Irritating to eyes, nose and throat.  
If inhaled will cause coughing or difficult breathing.  
If in eyes, hold eyelids open and flush with plenty of water.  
If breathing has stopped, give artificial respiration.  
If breathing is difficult, give oxygen.

LIQUID  
Will burn skin and eyes.  
If swallowed will cause nausea and vomiting.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### Water Pollution

Effect of low concentrations on aquatic life is unknown.  
May be dangerous if it enters water intakes.  
Notify local health and wildlife officials.  
Notify operators of nearby water intakes.

Restrict access. Evacuate. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	<b>FLAMMABLE.</b> Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Stop flow of gas if possible. Cool exposed containers and protect men effecting the shutoff with water. Let fire burn.
<b>Exposure</b>	<b>CALL FOR MEDICAL AID.</b>  <b>VAPOR</b> If inhaled, will cause dizziness and difficult breathing. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  <b>LIQUID</b> Will cause frostbite. Flush affected areas with plenty of water. <b>DO NOT RUB AFFECTED AREAS.</b>
<b>Water Pollution</b>	Not harmful to aquatic life. May be dangerous if it enters water intakes. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Butanoic acid, butyl ester Butyl butanoate Butyric acid, butyl ester	Liquid  Colorless  Ester odor  Floats on water.
<b>Shut off ignition sources. Call fire department. Avoid contact with liquid and vapor. Keep people away. Stop discharge if possible. Stay upwind. Use water spray to "knock down" vapor. Isolate and remove discharged material. Notify local health and pollution control agencies.</b>	
<b>Fire</b>	COMBUSTIBLE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Water may be ineffective on fire. Extinguish with dry chemicals, alcohol foam, or carbon dioxide. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID  VAPOR Irritating to eyes, nose, and throat. If inhaled, will cause headache or dizziness. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. If swallowed will cause nausea, vomiting, dizziness, or headache. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES: hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS: have victim drink water or milk and induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS: do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of local water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 4-tert-Butyltoluene p-tert-Butyltoluene p-Methyl-tert-butylbenzene 1-Methyl-4-tert-butylbenzene TBT Toluene, p-tert-butyl	Liquid  Colorless  Aromatic gasoline-like odor
Restrict access. Call fire department. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	Combustible. Water may be ineffective on fire. Wear self-contained breathing apparatus and protective clothing. Extinguish with dry chemical, alcohol foam, or CO <sub>2</sub> . Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to skin, eyes, and respiratory tract. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen. IF IN EYES, hold eyelids open and flush with plenty of water.  LIQUID Irritating to skin, eyes, and respiratory tract. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED, do not induce vomiting.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.
